

B-123

HIGH VELOCITY PET DRYER

The XPOWER B-123 high-speed pet dryer provides salon-quality drying results at home, saving you time and money compared to taking your pet to a groomer. The airflow of this dryer is 220 CFM, which is significantly better than standard human hair dryers. The dryer can dry dense double coats and large dog breeds more effectively and efficiently. The dryer features variable speed control so you can adjust the output to suit your preferences and your pet's comfort. The 4.5 hp single motor runs quietly, which is especially useful for sound-sensitive dogs who may be startled by loud noises. Quiet operation and variable speed settings can provide your pet with a more comfortable and stress-free drying experience. The dryer has two heat settings that can be adjusted for different coat types and pet preferences. The dryer comes with an 8-foot flexible hose with a heat protection handle. This design feature makes it easier to maneuver the dryer around your pet's body and keeps the hose from getting too hot during use.

EASY HOSE INSTALLATION

Connect the hose

Connect the
heat-proof hand grip

Choose and connect
the nozzle

Plug in power and
power on
